

The combination of **foodmailer®+ ICEPACKECO®+ foodmailer®calculator** has been perfectly coordinated. ICEPACKECO®refrigerants are space-saving, environmentally friendly, can be reused several times and are completely recyclable.

## You can cool your goods at optimum temperature with ICEPACKECO:

1. The foodmailer calculator®calculates the exact amount of ICEPACKECO®for your foodmailer® depending on various parameters (product, outside temperature, delivery time). And *thus* you avoid using too many IcePacks, save money and protect the environment.
2. Place the IcePacks in water for 10 minutes.
3. Now place the IcePacks in a plastic container.
  - Place the first layer with the moist, unprinted side facing down.
  - Place the second layer with the unprinted, moist side facing upwards, i.e. the printed side on the printed side.
  - Place a plastic film on this layer and add another layer; a maximum of 4 IcePack units can be placed on top of each other.
4. The freezing time of the IcePacks at  $-18^{\circ}\text{C}$  is at least 10 hours.
5. Place the IcePacks in the foodmailer®close to the goods and on the inside wall. The IcePacks should always be placed on top of the goods to be dispatched.
